Company Overview:

AquaBounty Canada, Inc. (ABC) is the wholly-owned subsidiary of AquaBounty Technologies, Inc. (ABT), a company focused on enhancing productivity and sustainability in the fast-growing global aquaculture market. ABT uses genetic manipulation and other molecular techniques in order to improve the quality and yield of fish stocks and help the industry meet growing consumer demand.

ABC maintains a hatchery and R&D facility in Fortune Bay, PEI, that houses the broodstock for the company's AquAdvantage® Salmon (AAS) – a genetically modified Atlantic salmon that can grow to marketable size (4.5 kg) in about half the time of traditional farmed Atlantic salmon. By placing a salmon growth hormone under the control of an alternative genetic promoter, more consistent levels of growth hormones are synthesized, which accelerates early stages of early development, resulting in achieving final size in 18-20 months instead the 28-36 months it takes for conventional salmon.

Job Description: General labourer

AquaBounty is looking for permanent full time employees and temporary seasonal employees. We will be screening labourers for full-time positions, seeking people with initiative, attention to detail, and overall good work ethics.

Previous experience with electrical, plumbing, carpentry, engineering, or aquaculture will be considered an asset.
